

Website Development - Webpage Migration

Webpage Migration is a process of **moving a webpage from one host to another**. This process is done for various reasons, some of which are –

- You are not satisfied anymore with the support of the Hosting Company
- Prices are cheaper to another hosting
- Your actual hosting plan doesn't fulfill your needs anymore
- Technology offered is not competitive anymore, etc.

As migration is a process, the following steps are needed to complete it in a minimal downtime of your webpage.

- We must fully backup our webpage as discussed in the previous chapters.
- Upload the backup file in the new hosting.
- Unzip files in the Public folder.
- Import the database file.
- Configure files with the credentials of the new database.
- Point your new domain name servers with your current registrar and wait for the new records to be propagated.
